Virtual Environments

Our mission is to create a better healthcare environment for patients, young and old; and to change the way people perceive and experience healing. Virtual Environments is dedicated to achieving this with our range of Virtual Environment products.

Vista Coat is a range of high-quality self-adhesive vinyl products which are produced with high-resolution stunning visuals. Available as a Wall Wrap or Floor Wrap this product will stand the test of time and offer you a vibrant surface for years to come.

Bring some light and colour to your procedure and waiting rooms. With Virtual Skylights and Windows your patients can experience the view of a beautiful sunrise or a star-filled night in any room at any time of the day.

Cinema Skin projects videos and animations onto surfaces such as a CT or MRI scanner, adding a whole new level to the patient's experience. No other product gives you this level of flexibility by change between multiple adult and paediatric themes in seconds.

Convert your clinical, stark looking medical equipment into works of art. Scanner Skin is a conformable self-adhesive vinyl that is coated to ensure longevity and a cleanable surface.

Mood Lighting is a simple and effective way to change the entire feeling of a room. With LED strip lighting and down lighting you can set a room to any colour of the rainbow and even fade between themes.

Show off your practice anywhere with Virtual Practice. This product sets you apart from competition, allowing you to display your practice in 360 degree panoramic views. It can even be loaded on to your corporate website for promotional purposes.

Wall Wraps

Lady Cilento Children's Hospital

Wall Wraps come in a range of playful or relaxing themes to suit your environment. Printed graphics onto a high-quality vinyl and adhered to your walls like wallpaper this product will stand the test of time and offer you a vibrant wall covering for years to come.

Wall Wraps are one of our most versatile options and can be installed just about anywhere you can imagine. In a very short period of time any space can be transformed from an empty dull environment into a completely new world. From eye-popping visual feasts that excite the eyes to calm, relaxing or inviting ambient vibes, whatever environment you want to build, Virtual Environments is their to help you.

Choose from one of our photographs, supply your own or have our in-house photography team go on a field trip to an iconic location or scene from your city or favourite place to use.

Floor Wraps

Using Floor Wraps in your practice will enhance any room and create a positive experience for you and your patients. These wraps are made with durable materials that can withstand sanitary cleaning and also remain tread resistant.

Floor Wraps can display illustrations, photographs or any kind of custom artwork you can imagine.

Virtual Skylight

Queensland Diagnostic Imaging

Bring life and energy into your practice.

Virtual Skylight provide a realistic window in the ceiling that allows patients who are laying on an imaging table to gaze into. Displaying anything imaginable; clouds, a thought-inspiring night sky, or a beautiful jungle canopy. These virtual openings are often the centre piece of an integrated solution but can equally work in isolation to transform any dull or sterile room into something warm and welcoming.

The size, shape, and image can be custom tailored to your every need. Whether you want a square, circle, or a more complicated shape, Virtual Environments can design a solution to fulfil your requirements. Take advantage of our extensive library of stunning photographs, or seek the guidance of our talented in-house creative team to convert your vision into a reality. Alternatively, we can use photos or images that you provide for an extra personal touch.

VIRTUALview

Virtual Skylights In Use

Virtual Skylights can enhance the visual appeal of any room. With plenty of photos to choose from and the ability to tailor design something special for you, the possibilities are endless.

Here are some examples of how Virtual Skylights can completely change the look of a medical imaging room and make them a captivating experience for the patient.

Circular Virtual Skylight

Rectangular Virtual Skylight

Available Configurations

Virtual Skylights can be dropped into existing t-bar style ceiling grids. The standard configurations are available in both 1200mm x 600mm and 600mm x 600mm sizes. Other sizes including circular shapes are available on request.

1.8m x 1.2m

1.2m x 2.4m

1.8m x 2.4m

3.6m x 1.8m

Round

Virtual Skylight Motion

Simulate the world above.

During procedures where patients are required to lie on their backs, Virtual Skylight Motion offers a unique distraction device to keep them still and relaxed by taking their mind off the procedure.

Originally designed to be used in dental environments, Cinema Ceiling is perfect for ultrasound applications. Using the same proprietary technology that you can find in Cinema Skin, you can switch between any number of videos, animations, and even DVDs to suit the patient.

The projection unit sits out of the way on one of the walls and uses an ultra-short-throw lense to ensure a great picture while not interfering with storage space or the procedure.

Virtual Window

A window to another world.

Virtual Windows are simulated viewers into other worlds. Relaxing beaches, Blissful forests, and Vast galaxies are just a few of the endless possible designs available for your medical practice.

Like Virtual Skylights, they are great for promoting a relaxing environment for patients and staff. These virtual openings are ideal for complementing a Virtual Skylight or they can also be used to enhance a space on their own.

CINEMA**skin**

A new dimension to patient relaxation

CinemaSkin projects videos and animations, through proprietary software, onto the gantry of a scanner. Visually stunning, CinemaSkins are 'cut' to fit the equipment so there is no bleed into other surfaces or into the patients eyes. The projection is controlled through a web-based interface that is accessed on a computer in the control room and can be changed to suit the patient.

This means that the operator can change from animations to scenes of nature, or the patient can even watch their favourite movie. In a paediatric facility that looks after infants through to 18 year olds, CinemaSkin gives the greatest possible flexibility in matching the Virtual Environment to the patient. CinemaSkins can also be used in other parts of the hospital, linked to tablets, to run information about the hospital or to project soothing scenes in other parts of the hospital such as public areas and waiting rooms.

Lady Cilento Children's Hospital

Royal Brisbane and Women's Hospital

SCANNERskin

Medical equipment is designed to be functional, and as a result, not very inviting. Scanner Skins make your medical equipment, such as imaging devices, a more welcoming and enjoyable experience for your patients. Scanner Skins are made from a highly conformable vinyl material. This vinyl is high-quality and coated to prolong its life making it easier to clean.

Virtual Environments has experience applying wraps to a range of different devices, from MRI and CT scanners, to ceiling suspension systems, mobile x-ray equipment, or even patient beds.

National Capital Diagnostic Imaging

Westmead Children's Hospital

Using a combination of LED strip lights and LED down lights, Virtual Environments is able to greatly enhance the look and feel of any room.

Using the remote control to adjust the lighting, you are able to set any desired colour to suit the room's theme or even the patients favourite colour. This makes for a much more engaging experience that will help soothe the mind of anyone in the room.

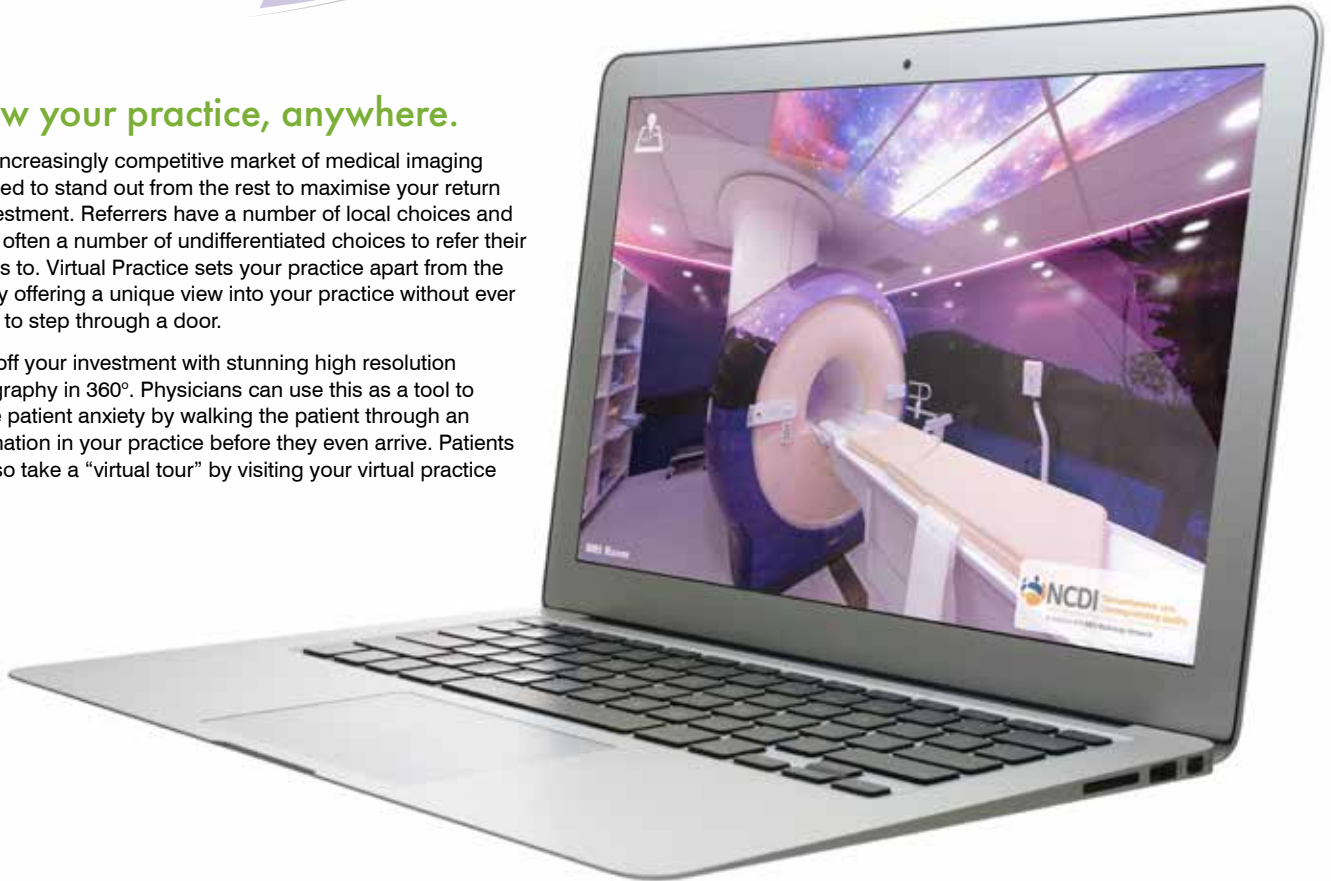

Show your practice, anywhere.

In the increasingly competitive market of medical imaging you need to stand out from the rest to maximise your return on investment. Referrers have a number of local choices and just as often a number of undifferentiated choices to refer their patients to. Virtual Practice sets your practice apart from the herd by offering a unique view into your practice without ever having to step through a door.

Show off your investment with stunning high resolution photography in 360°. Physicians can use this as a tool to reduce patient anxiety by walking the patient through an examination in your practice before they even arrive. Patients can also take a "virtual tour" by visiting your virtual practice online.

Children's Themes

Going to hospital and undergoing imaging procedures can be a very harrowing and scary experience for any patient. For paediatric patients, the level of anxiety can be even greater as they do not have the years of knowledge and experience that can help some adult patients. The machine makes strange noises and looks alien. The room looks stark and sterile. And the smell of hospital disinfectant pervades. They may also be feeling unwell and have worried parents with them. Getting them to go into a scanner and, once in, to relax, stay still, and follow the technologist directions can often be challenges that are insurmountable. This can result in sedation of the patient.

Virtual Environments has developed a set of themes designed specifically with children in mind. They are both relaxing and playful and are suitable for a wide range of age groups. All our creative work is done internally which gives you the greatest flexibility. We can easily modify one of our existing themes to suit your room or corporate colour scheme. Or we can develop something truly unique from scratch just for you.

Natural Themes

Crafted with the beauty of nature.

Nature provides us with beautiful scenes of lush green hills, colourful rain forests and awe-inspiring landscapes. Positive emotion plays an important role in healing and nature has a universal affect on us all. That is why our goal is to capture the best parts of what nature has to offer and provide them to you and your patients in unique and innovative ways.

Our range of natural themes come from all around the world, from our partners and our own in-house photographers. A common request is to capture a local landmark and display that on stunning printed Wall Wraps within a scan room. Our photographers are ready to turn your imagination into reality.

Custom Solutions

Virtual Environments can custom develop just about anything you can dream of. The only limitation is your imagination. Contact us today to discuss what we can do together.
